

Worker management

Armaor software

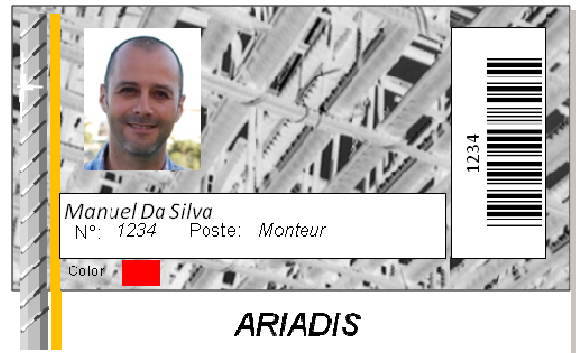

Worker management

- * ID Card
- * Real Time Monitoring
- * Manual Mode
- * Reports

One of the main ideas is to **extract** from your production the workers' **efficiency**. Some **Barcode readers** will be installed on the workshop and each worker will be **flagged up** at his shift. Thus, we can **monitor** them and get their **production performances**.

ID Card

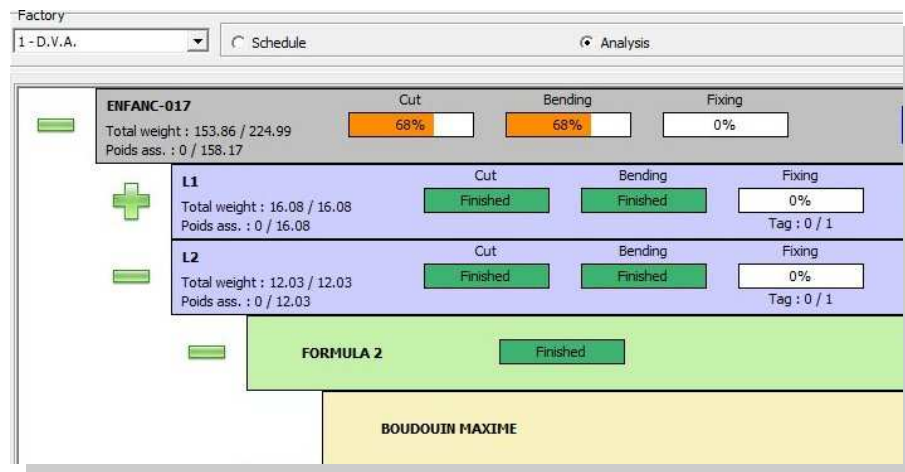

Each **worker** will get an **ID card** with a bar code printed on it. This ID Card will be scanned in the **begining** and in the **end** of the **shift**. Using the **Armaor downloading system**, we can **link** each worker to his work.

Real Time Monitoring

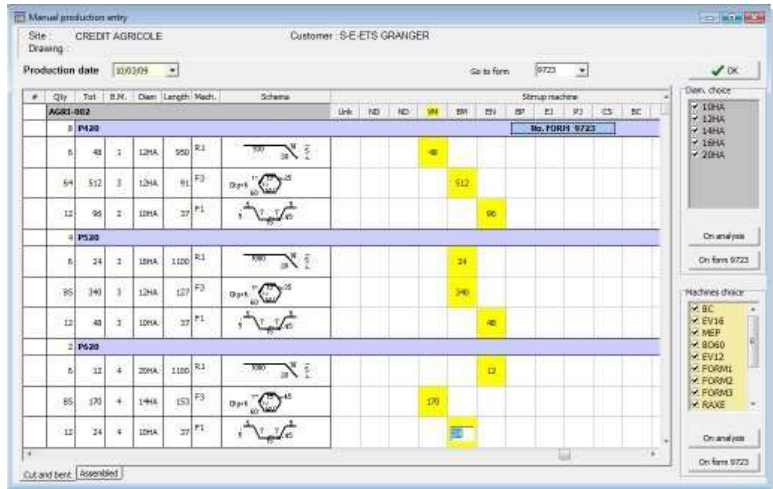

Coupling **both** modules, the worker management and the downloading system, helps you to **monitor** your workshop and the workers.

You get the **production progress** by order, member, etc. You also see which worker is working on which machine.

Manual Mode

If you need to **adjust** or **change** some **production information** you can still use the **Manual mode**. This mode can also be **useful** if you get a **technical problem** on bar code reader.

Reports

These new modules enable you to check more precisely your workers' production with new information available:

Daily production:

You get day by day information on each worker such as: the arrival/departure times, his production by weight, length, number of shapes done, etc.

Summary Production:

You get a summary on a period per worker on which you can find his production weight, average diameter cut, etc
